Dry Goods, Groceries, Boots, Shoes, Hats Caps and Clothing.

Goods always what they are recommended to be. Main Street, Germantown, Ky.

## Kendall's Spavin Cure.

The Most Successful Remedy ever discovered, as it is certain it effects a cure and does not blister. READ PROOF BELOW.

From Rev. P. N. GRANGER,

Presiding Elder of the St. Albans District.  
ST. ALBANS, VT., Jan. 20, 1880.  
DR. B. J. KENDALL & Co., Gents:—In reply to your letter I will say that my experience with Kendall's Spavin Cure has been very satisfactory indeed. Three or four years ago I procured a bottle of your agent, and with it, cured a horse of lameness caused by a spavin. Last season my horse became very lame and I turned him out for a few weeks when he became better, but when I put him on the road he grew worse, when I discovered that a ring-bone was forming, I procured a bottle of Kendall's Spavin Cure and with less than a bottle cured him so that he is not lame, neither can the bunch be found. Respectfully yours,  
P. N. GRANGER.

## Perseverance Will Tell.

STROUGHTON, MASS., March 16, 1880.  
B. J. KENDALL & Co., Gents:—In justice to you and myself, I think I ought to let you know that I have removed two bone spavins with Kendall's Spavin Cure, one very large one, don't know how long the spavin had been there. I have owned the horse eight months. It took me four months to take the large one off and two for the small one. I have used ten bottles. The horse is entirely well, not at all stiff, and no bunch to be seen or felt. This is a wonderful medicine. It is a new thing here, but if it does for all what it has done for me it will be very great.  
Respectfully yours,  
CHAS. E. PARKER.

KENDALL'S SPAVIN CURE is sure in its effects, mild in its action as it does not blister, yet it is penetrating and powerful to reach a every deep seated pain or to remove any bony growth or other enlargement, such as spavins, splints, curbs, callous, sprains, swellings, any lameness and all enlargements of the joints or limbs, or rheumatism in man and for any purpose for which a liniment is used for man or beast. It is now known to be the best liniment for man ever used, acting mild and yet certain in its effects.

Send address for illustrated Circulars which we think gives positive proof of its virtues. No remedy has ever met with such unqualified success to our knowledge, for best results well as man.

Price \$1 per bottle, or six bottles for \$5. ALL DRUGGISTS have it or can get it for you or it will be sent to any address on receipt of price by the proprietors. DR. B. J. KENDALL & Co., 100 South 4th St., Philadelphia, Pa.

## Do toed Drugs.

"You ask me to tell you some of the adulterations and substitutions that are made by some dishonest and unscrupulous druggists," said Mr. Malcoms, a retired pharmacist yesterday. "and I might, Yankee-like, ask you to tell me some that they don't make. There is nothing within the range of human knowledge in the way of drugs that cannot be adulterated, and there is scarcely a drug that has not a substitute that will do anything but a practical eye or the test of a chemical analysis. Under the present system of carrying on the business there is nothing like a fair competition. The fact is that chemical science has taken such mighty strides that the art of substituting is now as familiar to certain grades of druggists as the simplest formulas in the books. These, I hope and believe, are few and far between, and yet there are enough of them to injure the trade and the reputation of honest dealers, and to perplex and worry the physicians. Among a certain class of people, not the very poor especially, there is a rage for cheapness, of which the charlatans of the drug trade have not been slow to take advantage. With these people to be well served is to be cheaply served, and they go home chuckling to themselves when they have saved a penny or two, never thinking that perhaps there search after economy would result eventually in a loss both of money and health. Sometimes, just before I retired from business, a man would come into my office and ask: 'What would you fill this bottle with laudanum for?' 'Seventy-five cents,' I would answer. 'Oh, I can get it filled for thirty-five cents.' I never argued the point, but let him get his laudanum as cheaply as he could. All I knew was that I could not sell it for that price. Probably he got it of less than half strength.

"My experience of drug stores leads me to believe that those which are always selling out and changing hands had better be avoided. The odds are that their stocks are never complete, and that their ability to fill even ordinary prescriptions is far below par. You remember Sawyer, late Nocemorf, in the Pickwick Papers, don't you, and the rows of empty drawers with their gilt labels? Well, there are some of that sort, I have no doubt, in this city. Young men, fresh from the schools of pharmacy, want to start in life for themselves, and most generally begin on a capital ludicrously disproportioned to their wants. A drug store is not like a grocery. It needs finer and more elaborate fittings, and thus by the time the young man has made his shop presentable his money is so nearly exhausted that he can buy but little or no stock. Then his temptations begin. He is dealing mostly with ignorant people and seeing how easily he can impose upon them he does it persistently, and soon becomes an adept in adulteration and substitution. Meanwhile, the honest druggist in the same neighborhood suffers. To put up good drugs he must charge good prices. But he lives in spite of his cheaper fellow-tradesman, for somehow the people sooner or later discover that he sells what they call for. Then the ambitious but cheap, young druggist puts up his shutters and decamps.

"One in a while one feels like taking a bottle of citrate of magnesia, and it is a good thing if one buys it at the right place. But it is not pleasant to know that some of the druggists make it out of epsom salts, which can be bought for a mere trifle. The process is a very simple one. They dissolve the salts in water, add a little citric acid to give the necessary sour taste, and throw in the bicarbonate of potassium to produce the effervescent. There you are, a prima-

article of citrate of magnesia, and I will venture to say that this concoction is daily palmed off on the public by men who would disdain to pick your pocket. I don't know that there is any tremendous profit in this preparation, for most of those who use it get it from druggists of established reputation; but I am certain that it is quite extensively made.

"One of the commonest and most profitable of the tricks practiced by the druggists is the manufacture of so-called fruit syrups from acids. Vanilla you will generally find pretty pure, for it is hard to imitate, and raspberry, strawberry, pineapple and lemon are also generally pure, although citric acid makes a very good imitation of lemon sirup. Ginger is also genuine, possibly because it is cheaper to use the root than to imitate its peculiar pungency. Orgeat and nectar are two of the most popular syrups, and yet it is safe to say that in the majority of instances they are made, not from the kernel of the bitter and sweet almond, as they should be, but from the oil of almond, which contains a considerable infusion of prussic or hydrocyanic acid. I do not say these syrups are highly injurious—in fact, I do not think they are—I only mention them to show the ease with which flavors are imitated.

"Pineapple, banana, pear, apple, strawberry and raspberry syrups can be very readily made from the artificial fruit essence, which is composed of a combination of fusil oil, sulphuric acids and acetate of potash. By varying his proportions, the clever manipulator produces the sirup he requires, and so skillful has he become that he can at will give his sirup the flavor of the bergamot or jargonelle pear, the sweet taste of the strawberry, or the slight and peculiar acid of the pineapple. There is, in fact, no end to his ingenuity.

"Digitalis, made from the foxglove," said an oculist, "is used as a heart sedative, but instead of making it by infusion of the leaves of the plant, in which the full power and freshness of the remedy are preserved, some druggists make it from the extract. This is sometimes, however, the fault of the patient, who dislikes to wait for the hour or more that the making of the infusion requires. When I have to prescribe podophyllin (the resin of the May-apple), which is used as a cathartic as well as a liver stimulant, I always write for an eighth of a grain if I know that the patient patronizes a first-class druggist. If, on the other hand, I know that he gets his drugs from a druggist who is not strictly A1, I double the amount. The powder of podophyllin is less expensive than the resin, and not so effective, and is often substituted for it. Chlorine water, which is largely used, should have a strong odor, but it is often served without any odor at all. It should always be fresh, and I am careful in prescribing it to know who the druggist is who puts it up. More than once I have prescribed boracic acid as an astringent, but have found it to expand the pupil like atropia. I do not know what was substituted for it in these cases. I believe many druggists look upon borax as a good substitute for boracic acid.—Philadelphia Times."

—A venerable darkey, seventy years old, had been claiming relationship with certain Washington families of color, and by telling them that he was rich, promising that he would remember them in his will and exhibiting to them rolls of bills, which he said, were genuine, so worked upon their susceptibility that he borrowed money right and left, and was entertained as a mascot. One day he was missed.—Washington Post.
